We have already programmed your new wireless modem/router for you!

Attach the power adapter to the POWER slot on the back of the TECHNICOLOR.

Plug the modem/router into a power outlet and wait for a few minutes while it configures.

- Connect from the grey WAN port on the TECHNICOLOR to the wall mounted Ethernet Jack with the Ethernet cable provided.
- Any computers that need to be hard wired will connect to any of the 4 Yellow LAN ports.
- **DO NOT CONNECT ANY COMPUTERS DIRECT TO THE WAN PORT ON THE TECHNICOLOR.**

    When connected properly the @ and (•) will be on and green. The primary difference between the 2.4GHz and 5GHz wireless frequencies are range and bandwidth. 5GHz provides faster data rates at a shorter distance, whereas 2.4GHz offers coverage for farther distance, but may perform at slower speeds.

Your Wireless Network's Name is: _____

Should wish to have your Network Name and or Password changed you can call Tech Support and we can personalize this

Internet Tech Support: 1-802-885-9002 * Toll free: 1-888-242-7584

Your Wireless Key (Password) is printed on a **label on the bottom of the router** and is all **CAPITAL LETTERS**.   If you happen to reset your router, this is also default password.

1) **Ethernet Ports** – These ports are used to connect non-wireless capable devices such as Desktop computers or Cell Phone signal boosters.
2) **WAN Port** – This port is used to connect to the Fiber (FTTH) box on the side of the house.
3) **Power Adapter** – This port is used to connect the A/C Power Adapter included with this device.
